

Make Your Work Orders Work for You

Get Real-Time Updates to Your Work Orders On The Go

Our Mobile Work Order App is available for use on iOS and Android™ compatible tablets and mobile phones. Your techs can pick up and close requests while in the field. No need to keep up with papers, call logs, or come back to the office to get updates on new orders.

Data Exchanged:

- Number and customer name
- Priority and ranking
- Status description
- Completed by (employee name and email)
- Date and time completed
- Assignments (up to five employees)
- Readings
- Serial numbers
- RFID type and number
- Latitude
- Longitude
- Photos (if authorized)
- Additional comments

Integrate with Our Utility Billing Software

Work order updates from our Utility Billing software are sent in real time to the app. You can specify the frequency of updates from the app back to your Utility Billing software. Depending on the configuration, full data pushes can be scheduled weekly or monthly.

Maintain detailed account and meter information, track locations, and organize data with built-in, customizable reports and exports. Detect meter-reading errors through simulation reports.

Easily Manage Requests

To streamline your work and increase productivity, our app is designed to share multiple data points with our Utility Billing software. You can filter the information based on priority, status, type, and the team member assigned to the order.
